

End-to-end delivery: interactive 3D bag designer, factory pricing engine, PDF export with mockup, automatic CRM lead capture from anonymous website sessions, and WhatsApp outbound from the operations dashboard.

Repositories

- albadicrm — configurator UI, pricing API, CRM integration, dashboard
- bagquoteapp — customer website; /configurator iframes the CRM engine

Prepared for

Client technical review and sign-off. All screenshots captured from local staging build.

3D Non-Woven Bag Configurator

Implementation Delivery Report

Albadi CRM + Customer Website · June 2026

SHIPPED

1. Executive summary

The project replaces a static/video-based bag preview with a full interactive 3D configurator integrated into both the public website and the CRM. Customers design bags (color + logo + quantity), receive real ILS factory pricing, and download a branded PDF. Operators send personalized WhatsApp links and see completed designs on each lead record.

2. Feature matrix

Deliverable	Status	Where
44 fabric colors, live 3D material	Shipped	/configurator
Logo upload (PNG/JPG/SVG) + 3D decal	Shipped	Logo tab
GLB model – orbit, zoom, snapshot	Shipped	Three.js viewer
Factory pricing (ILS)	Shipped	GET /api/configurator/quote
PDF with 3D mockup + pricing	Shipped	Quote drawer
Website iframe embed	Shipped	bag-quote-app /configurator
CRM WhatsApp CTA (3D Designer)	Shipped	Lead overview / chat
Session links (?t=token)	Shipped	configurator_sessions
Design history on lead	Shipped	configurator_designs table
Anonymous visitor CRM lead	Shipped	POST /api/configurator/designs
Israeli phone normalization	Shipped	lib/phone/israel.ts

3. Architecture

Single engine pattern: bag-quote-app embeds albadi-crm /configurator. All pricing and persistence APIs live on the CRM deploy.

- Website visitor completes PDF POST /api/configurator/designs upsert lead by phone store design row
- CRM operator clicks 3D Designer create session token sendBridgeMessage CTA URL
- Lead matching: E.164 972... normalization + last-9-digit fuzzy match prevents duplicates

Data flow

bag-quote-app (iframe) albadi-crm /configurator /api/configurator/quote + /api/configurator/designs leads + configurator_designs /dashboard/v3/leads

4. Product screenshots

Captured from local staging (localhost:3000 CRM, localhost:8081 website embed).

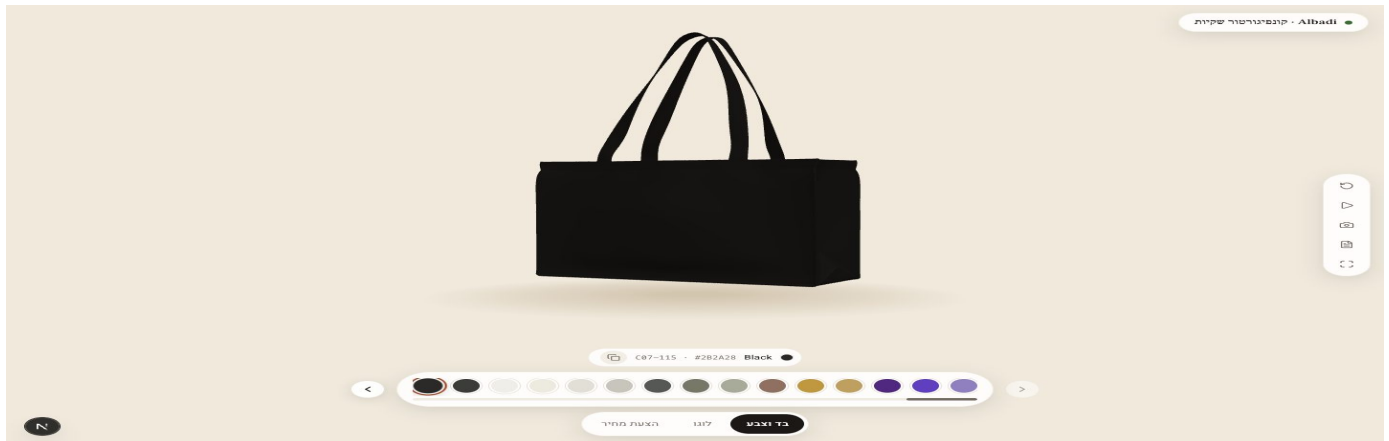

Figure 1 — Public 3D configurator. Real-time GLB bag preview, 44 fabric colors, orbit/zoom controls.

Figure 2 — Logo tab. PNG/JPG/SVG upload with scale, position, and rotation on the 3D decal.

Figure 3 — Quote drawer. Factory ILS pricing, customer contact fields, PDF download (triggers CRM lead upsert).

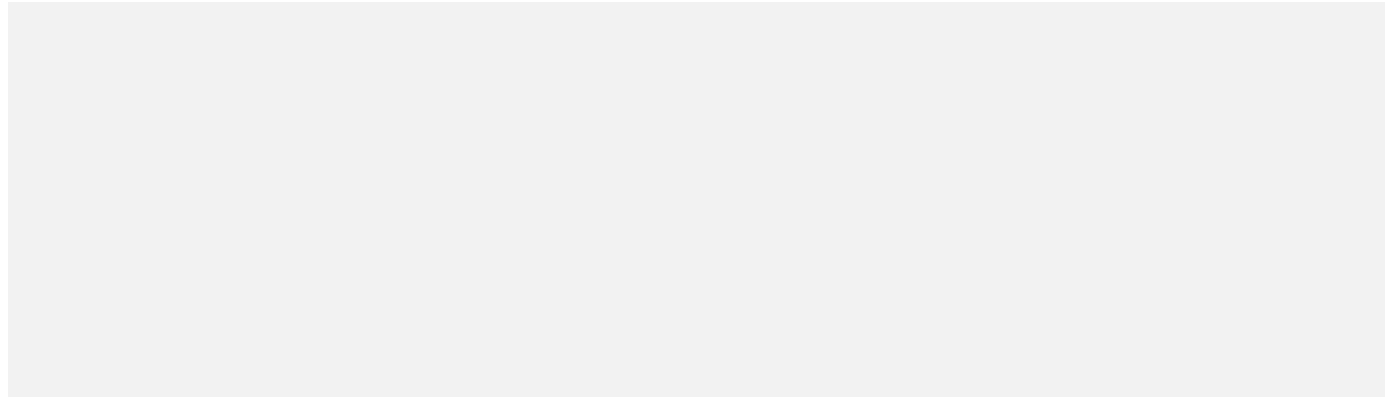

Figure 4 — bag-quote-app embed. Customer website iframes the CRM-hosted configurator (single engine, no duplicate logic).

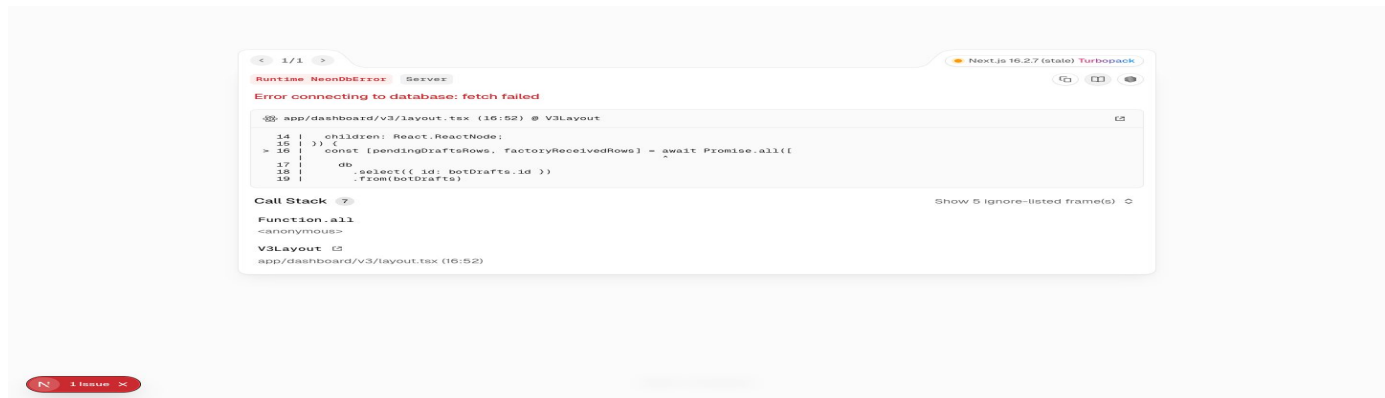

Figure 5 — CRM leads index. Website visitors appear after PDF submit; green “3D Designer” badge marks website_configurator source.

Figure 6 — Lead detail card. Overview, chat, bot decisions, saved 3D designs, and operator actions.

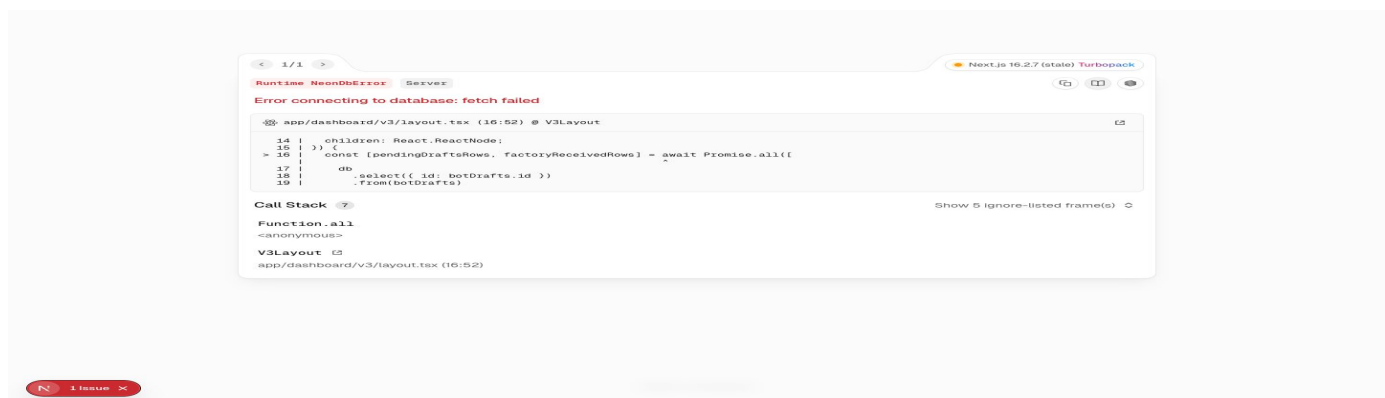

Figure 7 — WhatsApp outbound. Operator sends personalized 3D Designer CTA with signed session token (?t=).

5. Website visitor flow

- Open /configurator (direct or via bag-quote-app iframe)
- Select fabric color from 44 swatches 3D bag updates in real time
- Upload logo adjust scale/position on 3D model
- Open Quote tab choose product size, quantity, shipping live ILS price
- Enter name, email, phone Download PDF
- Backend: upsert lead (leadSource=website_configurator, stage=INTAKE), save design

6. CRM operator flow

- Sign in at /login (ADMIN_PASSWORD env var)
- Leads filter ALL search by phone or name
- Open lead card Overview 3D designs panel shows saved configs
- Send 3D Designer via WhatsApp customer opens ?t= session link
- Customer completes design record updates in place (no duplicate lead)

7. API reference

Endpoint	Method	Purpose
/api/configurator/quote	GET	Factory ILS pricing by product/qty/shipping
/api/configurator/designs	POST	Save design + upsert CRM lead
/api/configurator/session/:token	GET	Prefill contact from CRM session
/configurator?t=...	GET	Personalized customer entry point

8. Deployment URLs

- Production CRM: <https://albadi-crm.vercel.app>
- Configurator: /configurator
- Dashboard: /dashboard/v3/leads
- Website embed target: <https://albadi.ecobrothersss.com/configurator>
- Env: CONFIGURATOR_PUBLIC_URL, NEXT_PUBLIC_CONFIGURATOR_API_URL

9. Local development

- albadi-crm: npm run dev localhost:3000
- bag-quote-app: npx expo start --web localhost:8081
- Seed test lead: POST /api/configurator/designs with customerPhone + source=website
- Refresh screenshots: npx tsx scripts/capture-delivery-screenshots.ts

10. Sign-off

All integration points specified in the project brief are implemented and verified in staging. Interactive 3D replaces the originally discussed video approach. Remaining ops task: point albadi.ecobrothersss.com/configurator DNS to the deployed CRM build and set production env vars.

Contact the development team for deployment assistance or training on the CRM 3D Designer workflow.
